ECS 1100

Introduction to Engineering and Computer Science

Week 3: *Resume Review, ATS, and Using AI as a Student*

WHILE YOU GET SETTLED

Put your phone down; close your laptop. Talk to the folks around you.

What did you do over Labor Day? HW? Home? Vacay? What was the best part?

Session 3 · Resume peer review, career fair prep, AI error hunt, ATS and tailoring, personal AI-use protocol

What are we doing today?

Agenda:

1. Brands Reviewed
2. Resume Show and Tell
3. Tailoring your documents
4. Elevator speeches
5. AI in the classroom
6. Connections Assignments

Why are we doing this stuff?

This week's objectives:

By the end of the week, you will be able to:

1. Provide useful feedback to a peer about their resumes.
2. Explain the value and risks of using AI as a learning tool.
3. Describe the steps involved in completing the Connections Assignments.

1

Brands Reviewed

People know me by my _____ (charming lead-in questions??)

Why do brands matter?

- Self-awareness
- Degree <> Enough
- Differentiate
- Structure for all professional docs
- Goals
- Networking with other students (teamwork & future)
- REFERENCES!!!

Email etiquette

Subject line - ECS1100.5L5, Question about HW

Hello Prof. Younis,

When you discussed developing our brands in class on September 8, did you also mean emails?

Best,

Haz

Hazem Younis
Computer Engineering
Hazem.younis@utdallas.edu

What's missing?

2

Resume show and tell

How's it look?

What Happens After You Upload

Software reads your resume before a person does.

1 **PARSE**

The PDF is broken into fields: name, contact, education, employment history with dates, skills.

2 **MATCH**

Parsed text is compared against the requisition, mostly on skills, tools, degree, and graduation date.

3 **KNOCK OUT**

Work authorization, graduation term, and GPA where the employer asks, filtered before any scoring.

4 **RANK**

A recruiter opens a sorted list. On a first-year requisition, they are reading the top slice of it.

What Breaks the Parse

Formatting choices that cost you before anyone reads a word.

Structure

Text inside a header or footer, which many parsers do not read at all.

Two columns, where the parser reads straight across and interleaves them.

Tables and text boxes, which can drop out of the extraction entirely.

Content

Graphics, skill bars, and logos, which carry meaning only visually.

Section names other than Education, Experience, Skills, and Projects.

Inconsistent date formats, which break the employment timeline.

A PDF exported as an image yields no text at all, so nothing on it is read.

Keyword Matching

Matching is largely literal, so the words themselves do work.

PYTHON AND PROGRAMMING LANGUAGES ARE NOT THE SAME STRING

A requisition asking for Python will not credit a resume that says programming languages.

1 USE THEIR WORDS

For tools and skills you actually have, in the Skills section and in the bullet where you used them.

2 ONLY WHAT YOU CAN DISCUSS

A recruiter can ask about any line on the page, and the fair is where that conversation happens.

Spell out and abbreviate on first use, in the pattern Applicant Tracking System (ATS).

Why You Should Be Fluent With These Tools

The screening side is already automated.

POSTINGS	Employers use these tools to write and standardize the job descriptions you are reading.
SCREENING	Your application is read, parsed, and ranked by software before it reaches a recruiter.
FIRST ROUNDS	Increasingly used for interview scheduling and for scoring recorded first-round answers.

Declining to use these tools does not opt you out of being evaluated by them. Fluency means knowing what they are good at, which is coverage and phrasing, and what they cannot do, which is know anything about you.

Make use of a live reviewer

1. Swap you resume (paper or computer screen) with a partner.
2. Glance through the other person's resume in 7-10 seconds and make a note of your immediate impressions.
    - What stood out?
    - What do you think their brand is?
    - What do you see as their strengths?
3. Tell your partner your immediate reactions.
4. Take five minutes to carefully read through your partner's resume and provide more detailed feedback.

3 Tailoring your documents

Everyone likes a sharp-dressed resume!

What does it mean to tailor your resume?

Change your approach to each employer based on what they are looking for (more than keywords).

Make it easy for them to see that you have the qualifications and "spirit" they are looking for.

- Use the most relevant content
- Make it easy for them to see
- Connect with their mission, values, goals, etc.
- Do not fake it

Entry Level Industrial Engineer 1st Shift - Manufacturing

Siemens Industry is looking for an **Industrial Engineer - 1st Shif**t for our **Fort Worth, TX** factory located in the heart of the DFW Metroplex. Here you will work in a modern, dynamic factory environment, where we increasingly rely on artificial intelligence (AI) to optimize production processes and drive innovation. Our growing facility has over 450 employees that produce high-quality, engineered and make-to-order power distribution equipment. The industrial engineer's responsibilities include analyzing operations, designing workflows and production processes, reducing inefficiency, and ensuring that final products meet the established quality standards. This includes documentation and performance measurement of manufacturing processes, new product introduction, improvements to production lines, capital expenditures, cost savings measures and fixture design. **The hours for this role will be 3:00pm- 11:00pm**

You will make an impact:

- Develop and maintain detailed equipment lists for manufacturing and production operations.
- Conduct cost analyses for equipment, labor, and materials to support budgeting and investment decisions.
- Prepare accurate production cost estimates for quoting, planning, and financial forecasting.
- Collaborate with Manufacturing, Supply Chain, and Finance teams to ensure alignment on cost and equipment planning.
- Identify and implement process improvements to enhance productivity and reduce waste.
- Support layout planning, time studies, and workflow analysis to improve operational efficiency.
- Apply industrial engineering methodologies such as Lean, Six Sigma, and simulation modeling.
- Maintain documentation for cost models, equipment specifications, and process changes.

You will win us over by having the following qualifications:

Basic Qualifications:

- Bachelor’s degree in Industrial Engineering, Mechanical Engineering, or a related field.
- Minimum of 1 years of experience in industrial engineering or manufacturing operations. WIll also consider a recent college grad for this role.
- Understanding or exposure to manufacturing equipment and systems.
- Experience with ERP systems and engineering software (e.g., AutoCAD, SolidWorks, Excel, simulation tools).
- Legally authorized to work in the United States on a continual and permanent basis without company sponsorship.

Preferred Knowledge/Skills, Education, and Experience:

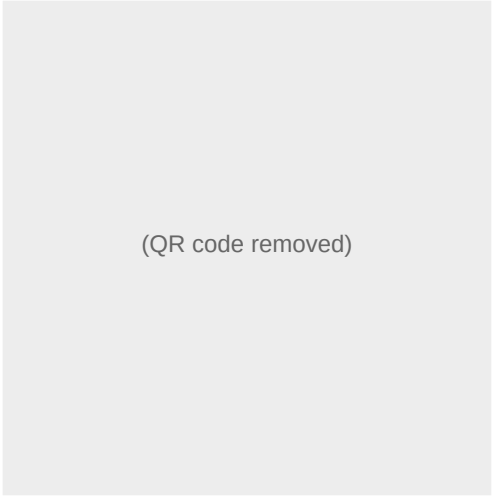

- Lean Six Sigma certification.
- Experience in aerospace, automotive, or other complex manufacturing environments.
- Familiarity with SAP or similar ERP platforms.
- Advanced Excel skills, including pivot tables and cost modeling.

About Siemens

We are a global technology company focused on industry, infrastructure, transport, and healthcare. From more resource-efficient factories, resilient supply chains, and smarter buildings and grids, to sustainable transportation as well as advanced healthcare, we create technology with purpose adding real value for customers. Learn more about Siemens here.

Try it on your own

Follow the QR Code and list the top five things you would want to be sure to emphasize when applying to the job:

https://tinyurl.com/ECS1100joblink

ICP-3: Now have AI try it

Copy and paste the job listing to an AI agent of your choice (you can use CometAI)

Ask the agent to create a list of the top 5 skills or experiences an applicant would need to emphasize, and have it explain the reasons. Keep in mind, there is no 'right' answer.

Write the AI's results separately next to the list you created.

Write an explanation of any changes you would make to your list based on the output from the AI and why.

https://tinyurl.com/ECS1100joblink

4 The elevator speech

You have 30 seconds – wow me!

The 30 Second Introduction

The spoken version of the sorting you just did.

1. **NAME, MAJOR, YEAR**
   Said clearly enough that they do not have to ask twice.
2. **ONE EXPERIENCE**
   The item you just placed in bucket one, in a single sentence.
3. **WHAT YOU WANT**
   Stated in the language of the posting you chose, not in general terms.
4. **A QUESTION**
   Something about their work that you could only ask having read the posting.

Two Rounds of Practice

Forty-five seconds each direction, both rounds.

1 ROUND ONE

With your peer review partner, who has already read your resume once today.

2 ROUND TWO

New partner, and one sentence cut from what you said the first time. Make it brief!

THE LISTENER SAYS ONE THING

Which of the four parts was weakest, and nothing else.
No general feedback, no encouragement, and no rewriting it for them.

5

AI in the classroom

Big elephant. Small room.

What is the purpose of AI to the learner?

When is it beneficial to use?

When is it not beneficial to use?

When is it harmful to use?

When is it unethical to use?

How should you use it to maximize your education?

AI-Use Policies Across Your Courses

Copy the actual sentence out of each syllabus, not what you assume the policy is.

	ECS 1100	ECS 1210	Your math course
PERMITTED			
PROHIBITED			
ALLOWED IF DISCLOSED			
NOT ADDRESSED			

A course with no written policy leaves the decision and the accountability with you. Ask in writing before the assignment is due, and keep the reply.

6

Connections Assignments

Professional Feedback

Professional Feedback Assignments

Purpose: to develop professional interpersonal skills by providing constructive feedback, a critical skill in the management of teams and groups

Basic idea:

1. Create video response to the types of questions you might receive when applying to jobs, internships, and graduate programs
2. You will be assigned to provide feedback to a peer's video from the class
3. Then you complete a survey about the providing and receiving feedback for each question.

Logistics

- There are 5 interview questions for which you will create a response and provide feedback during the semester
- The questions will be assigned roughly every two weeks throughout the semester
- Videos and feedback will be submitted through Canvas
- You will receive a link in an email from the instructor through a program called RedCap where you will complete a short survey

General guidelines

- ***Be respectful***
- Make your video response to the prompt by the due date (you will not be able to complete the assignment if you do not submit a video response)
- Each video response should be about 2 minutes long
- Strong feedback meets the goals of the person asking for feedback. In this case, the goal is improvement. Your feedback should be framed in terms of how to improve a response
- You will receive a rubric to provide feedback for each prompt. Make sure to highlight what was effective and provide suggestions to improve the response
- Your feedback will be anonymous
- After receiving your feedback, complete a survey that will ask you reflect on the provision and receipt of your feedback

Not Able to Review

1. You did not receive a video response to provide feedback
   - This indicates that you did not upload your own video response by the due date
   - You will only receive a video to provide feedback if you have submitted your own video response
   - You will not get credit for the assignment

2. Your anonymous reviewer did not provide feedback as part of the assignment
   - Your instructor will be able to see this in Canvas
   - **Make sure to complete the survey to receive credit**. You will indicate that you did not receive feedback in the survey.

Feedback Practice: Rubric

Rubric Category	Rubric Category Description
Response Clarity	Does the response clearly explain the task and how the instructions were unclear, or is the response ambiguous? Did the response identify specific information that was missing the instructions? Did the response indicate why this gap in instructions mattered?
Problem-solving	Did information in the response indicate problem-solving? Did the person indicate specific strategies for addressing the problem (e.g., asked specific questions to clarify, found a model/example, made a reasonable assumption and tested it)? Was the description of the problem-solving approach too vague?
Making decisions with uncertainty	Did the response include information about how they made decisions when uncertain? Was guessing mentioned without reasoning, or was the reasoning clearly provided. Did the response indicate a method for checking if their choice was on-track?
Outcome	Was the outcome provided? Did the approach work or not work?
Self-reflection/ Growth	Not every approach works. Was there a reflection of what was effective or ineffective and why? Was growth shown? How did the person learn from the experience?
Verbal Presentation	Did the person make eye-contact in video. Too many “ums” or other filler words (“like” or “you know”).

Post Feedback Instructions

- You will receive an email from the instructor with a link to the Post-Feedback survey.
- It is important that you use the link for your current Feedback assignment. **Old survey links will not open**.
  - Post-Feedback survey questions: reflection of the feedback you provided and your response to the feedback you received
- After completing the survey, you will receive a notification of completion email from the instructor

Why did we do again?

<u>This week's objectives:</u>

By the end of the week, you will be able to:

1. Provide useful feedback to a peer about their resumes.
2. Explain the value and risks of using AI as a learning tool.
3. Describe the steps involved in completing the Connections Assignments.

Before You Leave, and What Is Due

Two of these go in during class. The third is due Sunday night.

1	**ICP-3: Analyzing a job post**	Your findings on the three artifacts, and what the tool did when you asked it to check itself.
2	**HW 3**	The completed policy grid and two sentences on the case none of the three resolves. Due before the next class
3	**Engagement #1**	Welcome Week at UTD! Due Friday, September 11.
4	**Connections #1**	Due Friday, September 25.
